FUTEDU ACADEMY · NUTRITION WORKSHOPS

Yogurt Lineup

Session 7 · Frozen yogurt bark · Team activity sheet

SESSION	RECIPE	TIME	GROUPS	FORMAT
7	Frozen yogurt bark	~10 min	Table team	Read the labels

THE CHALLENGE

Your coach laid out four real yogurt tubs. Fill in the table from their labels (use the numbers **per 100 g**), then answer the questions. Not every plant-based yogurt has the same nutrition.

WHAT THE LABELS SAY

TUB	TYPE (SOY, COCONUT, OAT, DAIRY...)	PROTEIN PER 100 G	SUGARS PER 100 G	FIRST 3 INGREDIENTS
A				
B				
C				
D				

WHERE TO LOOK

- The **nutrition table**: always compare per 100 g.
- The **ingredients list**: the first ones weigh the most. Is there sugar, syrup or fruit puree before the yogurt itself?
- "Sugars" includes natural ones; if sugar or syrup is listed, part of it is added.

WORKED EXAMPLE (INVENTED NUMBERS, ONLY TO SHOW THE SUM)

If a tub had **5 g** of protein per 100 g, then 10 g of protein needs **10 ÷ 5 × 100 = 200 g** of that yogurt. A tub with 2 g per 100 g would need 500 g.

YOUR FINDINGS

1. Which tub has the most protein per 100 g, and which the least?

2. Which tub has the most sugar, and is any of it added?

3. Which tub goes on your bark, and why?

4. How many grams of your tub give you 10 g of protein? (Show the sum)

WRAP-UP

"Plant-based" does not tell you the protein or the sugar. The label does: compare per 100 g and read the first three ingredients.
