FUTEDU ACADEMY · NUTRITION WORKSHOPS

Yogurt Lineup

Session 7 · Frozen yogurt bark · Team activity sheet

SESSION	RECIPE	TIME	GROUPS	FORMAT
7	Frozen yogurt bark	~10 min	Table team	Read the labels

THE CHALLENGE

Your coach laid out four real yogurt tubs. Fill in the table from their labels (use the numbers **per 100 g**), then answer the questions. Plant-based is a good start, but the tubs are not all the same: compare **protein, sugars and saturated fat**.

WHAT THE LABELS SAY

TUB	TYPE	PROTEIN /100 G	SUGARS /100 G	SAT. FAT /100 G	FIRST 3 INGREDIENTS
A					
B					
C					
D					

WHERE TO LOOK

- The **nutrition table**: always compare per 100 g. Under "fat" find the line **"of which saturates"**.
- The **ingredients list**: the first ones weigh the most. Is there sugar, syrup or fruit puree before the yogurt itself?
- "Sugars" includes natural ones; if sugar or syrup is listed, part of it is added.
- **The sum** (invented numbers): a tub with 5 g of protein per 100 g needs 10 ÷ 5 × 100 = **200 g** to give 10 g.

YOUR FINDINGS

1. Which tub has the most protein per 100 g, and which the least?

2. Which has the most sugar, and is any of it added?

3. Which has the most saturated fat, and where could it come from?

4. Which tub goes on your bark, and why?

5. How many grams of your tub give you 10 g of protein? (Show the sum)

WRAP-UP

Plant-based is a good start, but the tubs are not all the same. The label tells you the protein, the sugar and the saturated fat: compare per 100 g and read the first three ingredients.
